GIS on Internet

- - **Web Mapping Service (WMS):** Users view layers as simple images, but they don't access to attribute tables

- - **Web Feature Service (WFS):** Users can also access to attribute tables of vector layers, and even make changes and insert new elements (WFS-T, transactional)

- - **Web Coverage Service (WCS):** Users can access to raster layers in GIS formats (not only as simple images)

- - **Web Processing Service (WPS):** Users can use spatial analysis tools without any GIS software installed locally
